

FLASHHOSTING PLATFORM

NetMasters BV is a Macromedia Certified Alliance Partner and the leading hostingprovider in The Netherlands regarding Macromedia serverproducts. NetMasters BV was the first in hosting Macromedia Flash Communication Server with the start of the 'FlashHosting Platform'.

The 'FlashHosting Platform' started in June 2003 with the launch of www.flashhosting.nl, a website focussing on the product Macromedia Flash Communication Server and providing information about the product and flashvideo in general. Although Macromedia Flash Communication Server was just released, NetMasters BV started focussing on the product because of its potential. Since then FlashHosting became more common and is now the best known website in The Netherlands concerning Macromedia Flash Communication Server. It now delivers shared, dedicated and managed services for Macromedia Flash Communication Server in one of the most flexible ways due to the unique way of setting up accounts and servers by splitting maximum bandwidth and number of connections.

NetMasters BV uses a high capacity network with a maximum of 1gbit bandwidth per server. This high capacity network enables NetMasters BV to deploy high-demand streaming facilities with Flash Communication Server. NetMasters BV also has de availability of different datacentres to split high-demand streaming facilities through a load-balanced distributed model. NetMasters BV is mainly streaming from the RedBus datacentre in Amsterdam, The Netherlands.

NetMasters BV focusses on a full service model for its clients regarding Flash Communication Server through hosting, creative concepts, applications and tools. NetMasters BV delivers these creative concepts, applications and tools merely in co-operation with partners through the Quixys Platform. This way clients have one contact, tight services (no gaps as when using different parties for hosting and applicationbuilding) and a partner that can advise in both hosting as well as concepts, applications and tools. Some examples on which full service solutions can be delivered are: on-demand video/audio-streaming, live webcasts, video/audio-communication through webcam and chat, video/audio-mailsystems, videoconferencing, multiplayer games, videoconverting-tools and e-learning. For more information on the FlashHosting Project and applications please check the cases at www.flashhosting.nl or the services and solutions available at www.quixys.nl.

NetMasters BV has done several short- and longterm projects and has seen the growth of several clients because of the innovative nature of Flash Communication Server combined with a creative concept or product. NetMasters BV highly believes that Flash Communication Server and FlashVideo in general will grow even stronger in the future.

If you are not familiar with Macromedia Flash Communication Server please take a look at www.flashhosting.nl for more information and examples. If you are looking for a streaming or a communication solution with Macromedia Flash Communication Server please contact NetMasters BV to schedule a meeting and discuss the possibilities.
